

1st 145 MHz Russian EME Contest results

Dear HAMs, colleagues and friends!

We are pleased to present you the results of the first 145 MHz Russian EME Contest held on August 24-25, 2019, which was organized by the Russian Amateur Radio Union (SRR).

More than 190 Radio Amateurs from 40 countries of five continents took part in the competition. Russia was represented by HAMs from 31 regions of the country. Many stations worked from the field. All participants who sent reports will get certificates, the first 10 places will get awards and the winner will get the special trophy.

We tried to make the contest simple and understandable, where each participant would be interested to work. As a result, the "lunar" competitions have gained many new participants including BX5AI, R5BI, RC3W, RG3R, RK3DIL, SP2FRY, UA3YCX, UA4FQH, UA9CCL, UA9CFH and others. These HAMs will receive special stickers on their certificates.

The organizers would like to highlight the participants who managed to make good results despite the small ERP of their stations: RO3X, RK9Y, RA6C, R3UG, IK0IXO, RD3FD. These HAMs will also be awarded special prizes.

We will be glad to see all of you in the second 145 MHz Russian EME Contest that will be held in the summer of 2020.

BX2AI

My first EME contest,
Antenna: 4 x 9 V-pol Yagi
Power: 300 W
Rig: Icom IC-746
OP name: Huawei Su
OP Callsign: BX2AI
OP Grid: PL05SA

Additional info: my antenna tower is a portable trailer tower, the rotator is Yaesu G-5500, the photo is attached in this e-mail

Thank you very much.

LU8ENU

Juan Clemente
lu8enu
gf05rl

Antenna 2x3 wave length
Power 400Watts.

It is the first time that I participate in an EME 145mhz contest organized by you.

The station is small here, only 2x3WL and 400W.

The participation was important I could see it in my wather fail. I lost a part of the contest due to the blockade of the moon due to its decline, it was too positive for the southern hemisphere.

I hope to participate in the next one.

SP2FRY

Hi friends.

I am very happy that I could participate in Russian EME Contest.

I found information about the competition in the DL7APV calendar.

This was my first EME competition.

QSO with I2FAK was my first qso over the moon.

I also had qso with K0TPP but I did not receive the last RRR because the moon was only 0.5 degrees above the horizon.

In the competition I used equipment that I use for tropo qso.

My setup: 2x10 el. YU7EF stacked vertically, LNA HA8ET, IC-9700, PA 200 W on JT65B.

IK1UWL

Hi,

glad for a new EME initiative, which brought me to know a little better the regions of Russia.

I qsoed with 20 russian stations, of which 2 were new for me.

As usual also in other contests, only a minority of the stations on air were participating, so, especially the second day, a lot of time was spent calling cq without many results. European stations were prominent, together with some asian and very little americans.

My antenna is screened by a house for the first three hours after moonrise, so I lose far east stations, I am sure there was some activity from there.

I enclose my log. Compliments for the initiative, 73, Gio IK1UWL
